

The Chatbot Era: Stateless, Lightning-Fast, Single-Pass

Input → LLM Processing → Output

1 INPUTS

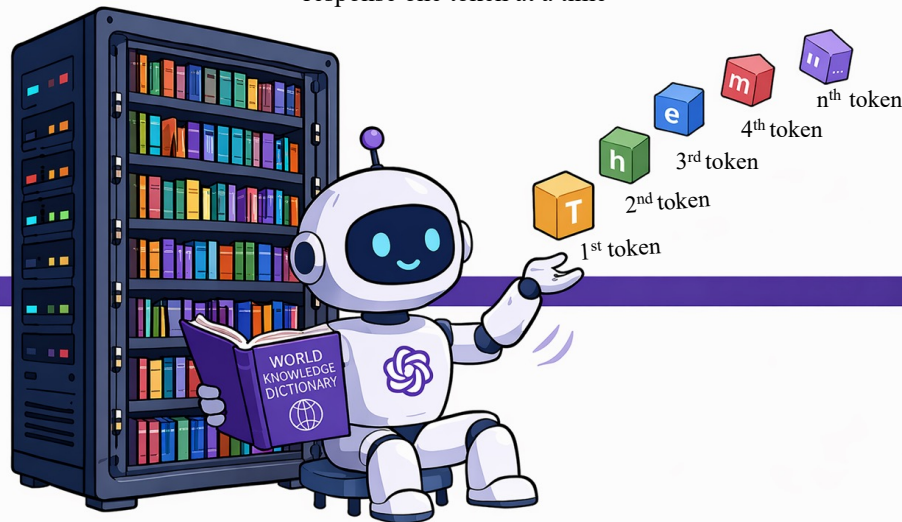

User provides a question in natural language

What is the significance of the moon landing in 1969 ?

2 CHATBOT LLM

The model processes the input using its compressed world knowledge and generates a response one token at a time

Trained on vast amounts of data, the LLM encodes knowledge efficiently and generates tokens sequentially in a *single forward pass*-no memory of past interactions.

3 OUTPUTS

The model returns a coherent, fluent response

The moon landing in 1969 was a landmark achievement that marked a major milestone in human history. It demonstrated the power of science, technology and international collaboration during the Space Race. This event not only expand our understanding of the universe but also inspired generations in STEM fields and fostered a sense of global unity and possibility.

One pass. No loops. No feedback. Just fast, Scalable Intelligence.

Lightning-Fast

Stateless

Single-Pass

Highly-Scalable
