

1 INPUTS

Project Brief / Long-Horizon Task

- Fix failing tests across multiple modules
- Resolve performance regressions
- Refactor for readability and maintainability
- Maintain backward compatibility
- Ling-horizon, multi-step objective

2 LOAD SKILL

Select & load reusable capability into workspace

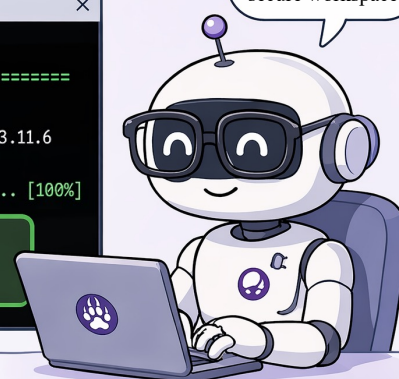

OPENCLAW WORKSPACE

Persistent · Secure · Governed · Observable

```
editor.py
1 def add(a, b):
2     return a + b
3
4 def compute(items):
5     total = 0
6     for x in items:
7         total += add(x, 1)
8     return total
Ln 8, Col 17 Spaces: 4 Python
```

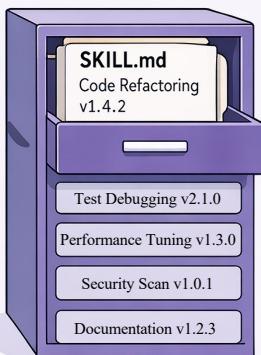

```
terminal
$ pytest -q
=====
test session starts
platform linux -- Python 3.11.6
collected 128 items
..... [100%]

✓ PASSED
128 passed in 3.21s
```

SKILL LIBRARY

Reusable · Modular · Versioned

SECURITY & GOVERNANCE

- ✓ Filesystem Access Scoped
- ✓ Network Access Restricted
- ✓ Secrets Isolated
- ✓ Resource Limits Enforced
- ✓ Audit Logging Enabled

Least Privilege · Policy Guardrails

ACTIVITY LOG & TIMELINE

Observable · Traceable · Recoverable

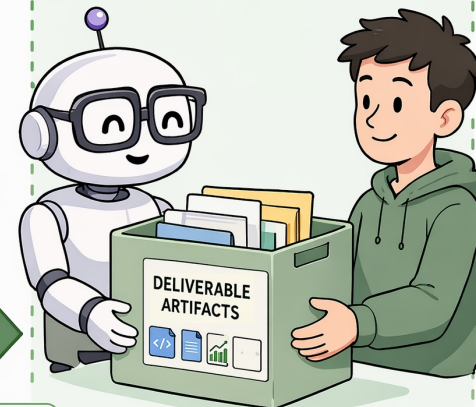

- 09:12 Workspace initialized
- 09:13 Skill loaded: Code Refactor v1.4.2
- 09:17 Edited: compute.py
- 09:21 Ran test suite PASSED
- 09:25 Commit: a1b2c3d
- 09:28 Edited: db / connector.py
- 09:31 Tests failed FAILED
- 09:32 Rolled back to a1b2c3d
- 09:33 Applied fix
- 09:36 Ran test suite PASSED

3 EXECUTE IN SECURE SANBOX

Run, observe and recover within governed workspace

5 TASK CLOSURE

Verified Final State

4 VERIFY & DELIVER

Verify final state & deliver audited artifacts

- ✓ All tests passing
- ✓ Quality gates satisfied
- ✓ Security scan clean
- ✓ Documentation updated
- ✓ Audit trail complete

CLOSED_LOOP FLOW

Continuous improvement through observation, rollback and safe iteration
